

Arjun Mehta

Software Engineer · Razorpay

Bengaluru | arjun.mehta@example.com | +91 90000 00000

SUMMARY

Backend engineer with six years building payments and fintech systems. Owns services end-to-end — from design RFC and architecture decisions through cross-team rollout, production operations, and incident response — across REST and gRPC microservices, Kafka-based event-driven platforms, and container-orchestrated workloads on AWS.

EXPERIENCE

Software Engineer · Razorpay

2020 – Present

Bengaluru · Payments & fintech infrastructure

- Led the **end-to-end redesign** of Razorpay's payment webhook delivery platform, authoring the RFC, defining service boundaries and a Kafka-based retry model, and owning production rollout.
- Scaled the platform to approximately **12 million webhook events per day**; improved successful delivery from 98.8% to 99.95% and reduced p99 processing latency from 420 ms to 240 ms.
- Coordinated rollout across **Payments, Risk, Reconciliation, and Developer Experience**, leading design reviews and migration-risk tracking with tech leads while mentoring three engineers.
- Designed and operated **REST and gRPC microservices** using Kafka, PostgreSQL, Redis, and AWS, supporting monitoring and incident response.
- Owned deployment and runtime operations for **six payment services on Amazon EKS** using Helm, probes, resource controls, autoscaling, rollouts, rollbacks, and production debugging.

CORE STRENGTHS

- End-to-end system-design ownership
- High-throughput, high-reliability delivery
- Cross-team technical leadership
- Kubernetes workload operations in production

SKILLS

System design & RFCs

REST & gRPC APIs

Microservices

Kafka · event-driven

PostgreSQL

Redis & caching

AWS

Amazon EKS · Kubernetes

Helm

Monitoring & incident response

Payments & fintech
